Solve Today's Top Identity Priorities

Lead the Next Era of Identity

Secure today's digital enterprise while preparing for AI, autonomous agents, and emerging threats.

Identity-Driven AI Advisory	Establish a secure foundation for autonomous agents and generative AI tools while guaranteeing end-to-end auditability across human and AI identities.
Eliminate Help Desk and Workforce Onboarding Fraud	Protect remote workforce onboarding and IT help desks from sophisticated deepfakes and AI-driven identity fraud by leveraging IDProof+ for rapid, biometric-based validation.
Real-Time Visibility Across Identity Ecosystems	Aggregate and cross-reference identity data across disparate security systems using IdentityLens to create contextual dashboards, track key metrics, and identify access anomalies before they become risks.
Deliver Seamless Digital Customer Onboarding	Create frictionless, regulatory-grade customer experiences with next-generation authorization and lightning-fast digital identity validation.

Migrate and Modernize

Build a modern, adaptable identity foundation.

Streamline Application Onboarding	Eliminate bottlenecks by using OrchestratiD to automate decision workflows, gather business stakeholder input, and accelerate application onboarding.
Accelerate Idira Cloud Migrations	Transition legacy Idira to the cloud rapidly and securely using SkyDock to automate the movement of critical users, platforms, and account configurations.
Seamless Any-to-Any Migrations	Accelerate migrations across leading identity platforms, including BeyondTrust, Delinea, Idira, Microsoft, and SailPoint, with our OrchestratiD automation platform.
Consolidate and Clean Up Legacy Security Structures	Audit and re-engineer sprawling directory groups and permission roles into a clean, modern, least-privilege model.
Unify the Workforce Identity Journey	Streamline the entire user lifecycle by establishing automated provisioning, secure single sign-on, and seamless day-one access for employees.

Secure and Govern

Strengthen control across workforce, privileged, customer, and machine identities.

Establish a Continuous Compliance Posture	Build a reliable, long-term framework for automated user access reviews, separation-of-duties governance, and continuous risk tracking across the enterprise.
Secure and Validate Non-Human Identities	Gain full visibility and governance over automated machine, cloud tool, and API connection credentials to close hidden security gaps .
Secure Third-Party and Contractor Networks	Establish secure external identity verification and time-limited access controls to safely collaborate with offshore teams and vendors.
Protect High-Risk Administrative Access	Implement rigorous control, monitoring, and governance over privileged accounts to stop credential theft and lateral network movement.
