

Automate Epic Access with Microsoft Entra ID Governance

MajorKey's Healthcare Automation Module integrates Epic with Microsoft Entra ID Governance to automate identity workflows across clinical and enterprise environments.

Powered by HorizonID, the module reduces manual provisioning, accelerates onboarding, and ensures clinicians have the right access when they need it.

In healthcare environments, delayed access and manual provisioning slow clinician productivity, increase administrative burden, and introduce risk to patient care. Organizations need a unified, cost-effective approach to manage identity and access across Epic and connected systems.

Streamline Identity and Access Across Epic and the Enterprise

The Healthcare Automation Module is built on MajorKey's HorizonID accelerator. It delivers deep Epic integration with event-driven automation aligned to Joiner, Mover, and Leaver processes, including onboarding, transfers, credentialing changes, role updates, and offboarding.

This approach reduces manual administration, improves consistency, and enables healthcare organizations to accelerate critical processes.

Key Capabilities

- **Accelerate** onboarding and lifecycle changes by automating Epic user and provider management
- **Improve** provisioning accuracy by governing Epic User (EMP) and Provider (SER) records, including Blueprint-based provisioning
- **Streamline** identity workflows across Epic, HR, and enterprise systems through event-driven automation
- **Enforce** least-privilege access with role-based controls and policies
- **Strengthen** compliance and audit readiness with automated access reviews, attestations, and reporting

About MajorKey Technologies

MajorKey is a Microsoft Security Elite Partner with 25+ years of experience solving complex and unique identity challenges, whether it's integrating with legacy applications or resolving complex workflows. As a global launch partner for several Microsoft Entra workloads, we bring proven expertise, close collaboration with Microsoft product groups, and trusted delivery scale.

Automate, Strengthen, and Accelerate Critical Identity Processes

Reduce manual administrative effort

Speed up clinician onboarding and transitions

Strengthen governance with better visibility

Improve care delivery through timely access

Protect sensitive Epic data with controlled access
