

Identity Envisioning Workshop

Kick start your journey to a zero trust security strategy with an identity envisioning workshop

Conducted by an experienced identity expert, the objective of an identity envisioning workshop is to examine existing systems and processes to provide recommendations for next steps.

The envisioning workshop allows us to understand your business, the challenges you face, and define what you're trying to achieve. We can help you understand what's technically possible and what can be achieved within your timescales and budget.

We look into detail at your business goals, your current infrastructure and practices, and aim to understand what can be done more efficiently. We consider software, security, scalability, future-proofing, budget, and regulations.

And then we propose solutions!

If you're looking for a way to...

- Enable users to work securely anywhere, at anytime
- Simplify application access and management
- Offer a seamless user experience with single sign-on
- Allow secure and seamless collaboration for internal and external users
- Ensure corporate data stays secure, however it is accessed
- Comply with data protection regulations
- Save money by consolidating platforms and removing redundant licenses
- Move closer to a zero trust security strategy

... then contact us to arrange your workshop!

Workshop Stages:

Stage 1: Examine and Document Existing Systems and Processes

1. Through interviews and discussions, identify and document specific concerns, objectives, and business requirements, along with projects already underway
2. Review your organization's IT environment and policies, including on-premises systems and cloud. This includes identifying how data flows in and out of each system and the identity lifecycle.
3. Identify gaps and opportunities

Stage 2: Detailed Report and Recommendations

1. Overview of current environment
2. Focus on long-term vision for identity
3. Break long-term identity journey into actionable interactions
4. Create a detailed report on prepared recommendations for improvements
5. Build a broad implementation roadmap

Stage 3: Briefing Session

1. Detailed presentation of report and executive briefing
2. Overview of technologies
3. Discussion of next steps
