

# MosaicStack by MajorKey

*Your Roadmap for Secure AI Adoption*

AI is not a standalone initiative. It sits at the center of how people work, how data flows, and how organizations drive productivity, security, and business transformation.

But scaling AI safely requires more than enabling new tools. Identity, security, and underlying architecture must be aligned to support enterprise-wide adoption.

MosaicStack makes sense of those moving parts. Through a structured three-day workshop, organizations gain a clear, actionable roadmap to securely adopt and scale AI using the Microsoft ecosystem.

## Start Your MosaicStack Workshop

Get a clear path to secure AI adoption in just three days.

[Get Started Here](#)

## The MosaicStack Workshop Answers Critical Questions:

**Are you ready to scale AI across the enterprise?**

MosaicStack evaluates identity controls, data security, access governance, endpoint posture, compliance alignment, and operational readiness to determine if your organization can securely expand AI use.

**Are you maximizing your Microsoft investment?**

MosaicStack uncovers underutilized capabilities, redundant tools, integration gaps, and legacy constraints, helping you extract more value from the solutions you already own.

**What is Microsoft 365 E7 and can it help close the gaps?**

E7 unifies productivity, identity, security, compliance, endpoint management, Copilot, and AI governance. MosaicStack maps where it fits and how it closes critical gaps in your AI strategy.

## How MosaicStack Delivers Value

### Inventory AI Usage & Controls

Identify all relevant controls across Microsoft and third-party environments, including PIM, threat protection, and Shadow AI.

### Define AI Boundaries

Establish policies, labels, and guardrails that determine what AI agents can access before scaling across the enterprise.

### Build a Board-Ready Roadmap

Collaborate with MajorKey experts to align stakeholders, prioritize investments, and deliver a clear plan for secure AI adoption.
