Identity Security Cloud Migration Recommendations

✓ **Do not treat it like a migration.** Treat it like a fresh implementation.

✓ **Build a roadmap that future proofs your IAM journey** beyond IGA

✓ When utilizing a SailPoint partner, **contact referenceable clients** to learn from their experience.

✓ Leverage SailPoint's free of **cost business value assessment**

✓ **Do not try to do it yourself.** Engage SailPoint or utilize a qualified partner such as MajorKey.

Best Practices for a Successful ISC Migration

Plan early for items that will not migrate
Plugins, Customizations, Irrelevant Rules, Data and Risk Models, etc)

Clean up your environment before the migration
Unused custom objects, workflows, rules, and decommissioned apps

Break your project up into multiple phases while prioritizing key features
Certifications, Access Requests, etc

Document current IGA processes before migration
Workflows, Quicklinks, etc.

Focus on functionality that is not user-facing first
Build Identity Model, onboard authoritative and critical apps, and configure JML processes

Take advantage of opportunities to improve business processes and reduce complexity
Simplify your workflows, etc

How MajorKey Helps Clients Expand on SailPoint Offerings

Access Insights and Access Modeling

- Improve your access reviews with risk insights from SoD, Outlier analysis and many more identity controls
- Achieve a role-based access model for your Identity program with SailPoint's
- AI-driven modeling engine to build roles across your organization
- Take advantage of MajorKey's deep industry expertise to ensure you're deploying vertical-specific best practices

Cloud Infrastructure Entitlement Management

- Manage JIT access to your Cloud infrastructure
- Streamline access to your DevOps tools
- Integrate your CIEM with IGA, SIEM, and service desk solutions
- Leverage MajorKey's deep cloud expertise by working with implementation consultants certified in all three major vendors

Non-Employee Identity Management

- Expand identity lifecycle for your contractors, vendors, partners and other 3rd party users, with a built-in authoritative user store, onboarding workflows and much more
- Implement vertical-specific best practices based on your specific industry

Access Risk Management

- Bring IGA capabilities for your SAP ecosystem with role-based access, SoD prevention, detection, and management
- Remediate access violations in SAP and manage firefighter access
