Identity Reporting Tool (IRT)

IRT delivers real-time, actionable insights across your identity ecosystem—empowering security teams to visualize, report on, and act on data from a single, unified platform.

The Identity Reporting Tool (IRT) is a powerful reporting and analytics platform purpose-built for cybersecurity and identity programs. It seamlessly aggregates data from key systems to deliver real-time dashboards, customized, audit-ready reports, and automated insights.

How it Works

IRT connects to your organization's identity, infrastructure, and ticketing platforms via prebuilt and configurable connectors. Once connected, IRT pulls data on a scheduled basis and normalizes it for reporting and analysis. Users can configure dashboards and reports to focus on the metrics that matter most to their roles.

Core Benefits of IRT

Custom Dashboards & Visualizations	Interactive, widget-based dashboards let users tailor metrics and views to highlight trends, compliance status, and risk indicators.
Time Series & Trend Analysis	Powerful temporal analytics uncover trends in behavior, compliance, or access activity to support strategic decisions.
Automated, Scheduled Reporting	Create and dispatch custom reports at defined intervals, ensuring stakeholders always have the latest insights in common file formats like CSV, Excel, and PDF.
Real-Time, Unified View Across Identity Systems	Integrates with leading cybersecurity and identity platforms and any API-enabled service to deliver consolidated, real-time security snapshots.
Role-Based Access Control	Granular permissions ensure users only see and interact with data relevant to their role, enhancing security and usability.
Automated Compliance Tracking	Surfaces privileged and unmanaged accounts through automation, streamlining audits and helping enforce PAM and IGA policies.
Embedded Automation with Embark	Integrates with Embark to trigger automated workflows like onboarding/offboarding accounts or provisioning VMs directly from reports, closing the loop between insight and execution.
