

Creating Value Through a SailPoint Identity Security Cloud (ISC) Migration

SailPoint's Identity Security Cloud stands at the forefront of identity management, offering an innovative platform that combines AI-driven insights with automated workflows to enhance security, ensure compliance, and improve efficiency. MajorKey specializes in guiding organizations through the transition to SailPoint's ISC, ensuring a smooth and secure migration process while maximizing time-to-value and ROI.

Identity Security Cloud Migration Recommendations

- ✔ **Do not treat it like a migration.** Treat it like a fresh implementation with minimal effort.
- ✔ **Build a roadmap that future proofs your IAM journey beyond IGA**
- ✔ **When utilizing a SailPoint partner, contact their referenceable clients to learn from their experience.**
- ✔ **Leverage SailPoint's free of cost business value assessment**
- ✔ **Do not try to do it yourself.** Engage SailPoint or utilize a qualified partner such as MajorKey

Best Practices for ISC Migrations

-  **Plan early for items that will not migrate**
Plugins, Customizations, Irrelevant Rules, Data and Risk Models, etc
-  **Clean up your environment before the migration**
Unused custom objects, workflows, rules, and decommissioned apps
-  **Break your project up into multiple phases while prioritizing key features**
Certifications, Access Requests, etc
-  **Document current IGA processes before migration**
Workflows, Quicklinks, etc.
-  **Focus on functionality that is not user-facing first**
Build Identity Model, onboard authoritative and critical apps, and configure JML processes
-  **Take advantage of opportunities to improve business processes and reduce complexity**
Simplify your workflows, etc

How MajorKey Helps Clients Expand on SailPoint Offerings

Access Insights and Access Modeling

- Improve your access reviews with risk insights from SoD, Outlier analysis and many more identity controls
- Achieve a role-based access model for your Identity program with SailPoint's AI-driven modeling engine to build roles across your organization
- Take advantage of MajorKey's deep industry expertise to ensure you're deploying vertical-specific best practices

Cloud Infrastructure Entitlement Management

- Manage JIT access to your Cloud infrastructure
- Streamline access to your DevOps tools
- Integrate your CIEM with IGA, SIEM, and service desk solutions
- Leverage MajorKey's deep cloud expertise by working with implementation consultants certified in all three major vendors

Non-Employee Identity Management

- Expand identity lifecycle for your contractors, vendors, partners and other 3rd party users, with a built-in authoritative user store, onboarding workflows and much more
- Implement vertical-specific best practices based on your specific industry

Access Risk Management

- Bring IGA capabilities for your SAP ecosystem with role-based access, SoD prevention, detection, and management
- Remediate access violations in SAP and manage firefighter access
